Dissertation Project (in progress)

- Study of the processes of democratic exclusion, in which rights of political participation are secured for certain segments of the population but denied to others. The dissertation focuses on democratic exclusion in the American context, but places this in a comparative perspective alongside cases in the United Kingdom and France.
- At present three chapters have been written and submitted: *Chapter 1* highlights the problem of democratic exclusion, placing this in the context of contemporary literatures on the extension of the suffrage. A model is presented explaining how suffrage expansion and contraction can be the result of the same political dynamics. *Chapter 2* outlines the understandings and institutions of citizenship as they existed during the colonial period, and how these were unsettled by the Revolution. The core of the chapter is a discussion of the ways in which these were reconfigured by the Jeffersonian Republicans in an effort to secure a national winning coalition. *Chapter 3* explores the trajectories of suffrage in the antebellum period, arguing that the political ordering of belonging consolidated by the Jeffersonians established the parameters in which political processes of democratization occurred. *Chapters 4* and *5* extend the analysis of the American case into the early 20th century, focusing on how the exigencies of coalition building during the Civil War and Reconstruction again re-configured American institutions and ideas of citizenship and belonging, and how these structured patterns of inclusion and exclusion in the late 19th and early 20th centuries. *Chapters 6* and *7* extend the analysis of democratic exclusion to the United Kingdom, looking at how coalitional exigencies structured the institutions of belonging and how these in turn structured the opportunities for extending the suffrage. *Chapters 8* and *9* look at these processes in France, arguing that the understandings of republicanism established parameters citizenship and suffrage that rendered efforts at exclusion in the late 19th century relatively unsuccessful. *Chapter 10* concludes with a discussion of the contemporary relevance of democratic exclusion, suggesting that the underlying dynamics continue to structure politics of rights.
