impunity in Northern Ireland was said to be a problem that existed in the area.

Transferring Sporting Events: Communal Conflict and Internal Security in Northern Ireland and Zimbabwe

Transforming Sporting Events: Communal Conflict and Internal Security in Northern Ireland and Zimbabwe

The comparative study has a long history of research in sociology and psychology, as well as in the field of political science. This book does constitute a useful survey of the development of a composite sports appar-
divided between those who believed Catholic
back lived better, those who thought that they had a better chance, and those who felt there was no difference.

The authors point out that many of these beliefs are influenced by social and economic factors, including the presence of Catholics in Protestant areas and the perceived economic benefits of living in Catholic areas. They argue that these beliefs are not based on objective evidence and that they should be viewed with caution.

In the context of the Catholic-Protestant divide, the authors argue that the divide is not just a matter of economic disadvantage but also a matter of social and cultural identity. They suggest that the divide is perpetuated by a range of factors, including the historical and cultural differences between the communities.

The authors note that policies to address the divide must take into account the complex nature of the divide and the need to address the social and cultural dimensions of the conflict.

The authors conclude by calling for a more comprehensive approach to addressing the Catholic-Protestant divide, one that recognizes the complexity of the issue and the need for policies that are both effective and sustainable.
